# *Introduction to Indian Music*

**“One Drone to Rule them All”**

and

**“Your Drone will be your Reality”**

How does one even approach understanding and writing about Indian music? Not only is the tradition of Indian music thousands of years old, but there are also two separate, though overlapping cultures that one needs to come to terms with and understand. The music of northern India follows the **Hindustani** tradition, while the music of southern India follows the **Carnatic** tradition. There are as many different elements in each culture as there are common elements. Most importantly, both traditions are entirely drone based, almost always incorporating a Tanpura or two to play the drone.

Put simply, Indian music is the most expressive **Just Intonation** music system the world has ever seen. All Indian instruments and music theory is the realization of playing perfectly in tune in **Just Intonation**. When there is a continuous drone playing, every note the solo performer plays is in relation to that drone. There is nothing more natural than tuning whatever note one is playing to sound the best and most in tune with the drone.

## ♦ Notes, Tetrachords, Parent Scales ♦

When one sorts out all the music terms in the different Indian languages, it is very clear that the musical language shared by many cultures is all built upon the same foundation. The reason is that as human beings, no matter where or when we were born, we all respond the same way to musical stimulus and come to very similar musical solutions.

Indian note names follow exactly the Sol-fa or Do Re Mi etc scale of Western music. In Indian music two notes or **Swaras** are immutable. They are **Sa (C)** and **Pa (G)**. In Indian music there is no such thing as a **C#** or **Cb**, or **G#** or **Gb**. **Sa (C)** and **Pa (G)** are unchangeable.

The rest of the note names can be altered by accidentals, but only in the following way:

**Db D Eb E F F# Ab A Bb B**

A scale, like in Western music, can only have each letter name once. In **Hindustani** music when we create a scale (using Western note names) we start with **C**, pick either **Db** or **D**, pick either **Eb** or **E**, pick either **F** or **F#**, pick **G**, pick either **Ab** or **A**, pick either **Bb** or **B**, and then of course end with the octave **C**.

When we exhaust all the possible note combinations in **Hindustani** music we find we have exactly 32 possible scales. These are called **“Thaats”** or **“Parent Scales”** in **Hindustani** music.

## Compendium Musica

The **Carnatic** music system also admits the notes **Ebb D#** and **Bbb A#**. When we exhaust all the possible note combinations in **Carnatic** music we find we have exactly 72 possible scales. These are called “**Melakartas**” or “**Parent Scales**” in **Carnatic** music.

Within the 72 “**Parent Scales**” are the 10 “**Thaats**” of **Bhatkhande**, though it is hard to know how all possible **Ragas** can only be classified using only these 10 “**Thaats**”.

Like in Western music, we can divide the scale into two **tetrachords**, a lower **tetrachord** of the first four notes starting on **C**, and an upper **tetrachord** of the next four notes starting on **G**.

By creating a chart with all the possible lower and upper **tetrachords**, we arrive at all the possible “**Parent Scales**”. It is a lot to come up with 72 different names for the “**Parent Scales**”. An interesting system called “**Katapaydi Sankhya**” assigns syllables to numbers, and so helps with coming up with names for the 72 “**Parent Scales**”. There is also a **Chakra** for each row.

### ♦ The 22 Shrutis ♦

Probably one of the most convoluted, misdirected and misleading topics in Indian music is the discussion on **Shrutis**. We will extensively analyze how we can make some sense of this.

When dealing with **Just Intonation** ratios, or **Shrutis** as they are called in Indian music, things can get super messy really quickly. Every note name or **swara** in Indian music has two possible **shrutis** or ratios, except the immutable **Sa (C)** and **Pa (G)**, which have one **shruti** or pitch each. This gives a total of 22 **shrutis**, each with their own ratio or pitch.

The **Carnatic** musical system also includes four extra notes or **swaras**, being **Ebb, D#, Bbb** and **A#**, which fortunately are **enharmonic** to **D, Eb, A** and **Bb**, so they don't add to the number of **shrutis**. We will look at these later.

In Western music, pairs of **Just Intonation** pitches or ratios are tempered out to a single pitch. This leaves precisely 12 different pitches in the octave, the pitches dependent upon the temperament being used. **Just Intonation** however is a tuning system, not a temperament, and everything is calculated using rational ratios. The ratios of a temperament are all irrational numbers.

The first thing one can ask is, are the ratios of the 22 **shrutis** set and defined? It seems that yes, there is only one set of 22 **shrutis**, the ratios of which have been historically set down and fixed.

All Indian fretted instruments have 12 or less frets to the octave. The next question to ask is, of the 22 **shrutis**, which 12 pitches should we tune the 12 frets to? The pitches that are most in tune to the **Sa Pa (C G)** drone, which we will call the **Primary** ratios, are:

## Compendium Musica

C-1/1 Db $\uparrow$ -16/15 D-9/8 Eb $\uparrow$ -6/5 E $\downarrow$ -5/4 F-4/3 F $\sharp\downarrow$ -45/32 G-3/2 Ab $\uparrow$ -8/5 A $\downarrow$ -5/3 Bb-16/9 B $\downarrow$ -15/8 C-2/1

That leaves 10 pitches or **shrutis** that we will call the **Secondary** ratios:

Db-256/243 D $\downarrow$ -10/9 Eb-32/27 E-81/64 F $\uparrow$ -27/20 F $\sharp$ -729/512 Ab-128/81 A-27/16 Bb $\uparrow$ -9/5 B-243/128

Besides the immutable **Sa Pa (C G)** ratios, we can see that every **secondary** ratio is a **Syntonic comma (81/80)** higher or lower than a **primary** ratio. A **syntonic Comma (81/80)** is 21.51 cents. Unlike Middle Eastern music, there are no quarter-tones in Indian music. All the **secondary** ratios are approximately 1/5 semitone shades, above or below, the **primary** ratios.

The 22 **shrutis** are also classified as **5 Limit** ratios, as the greatest prime factor of any of the above ratios is **5**, the **5 Limit** prime factors then being **2, 3** and **5**.

Playing against the **Sa Pa (C G)** drone, the 12 **primary** ratios are the pitches that are the most in tune and settled with the drone. They are the pitches that produce the most consonant harmony with the drones.

How can we in any way sense make of the extra 10 **secondary** ratios? Some people seem to think that these **secondary** notes are expressive variations of the **primary** ratios. If we want to go with the expressive variation theory we can see that:

E-81/64 F $\uparrow$ -27/20 F $\sharp$ -729/512 A-27/16 Bb $\uparrow$ -9/5 B-243/128

are all sharper than their **primary** ratio counterpart. These **secondary** pitches can just be bent up, though why anyone would think leaving in tune, pleasing and consonant intervals for sharp, out of tune intervals is beyond me. Nobody in their right musical mind or ear would ever think that **E-81/64** is a restful, peaceful and in tune note to the drone, compared to **E $\downarrow$ -5/4**.

The **secondary** pitches:

Db-256/243 D $\downarrow$ -10/9 Eb-32/27 Ab-128/81

are all flatter than their **primary** ratio counterparts. It is not possible to bend notes downward on a fretted instrument, so the frets for these notes would have to be tuned to these **secondary** ratios, and we would then have to bend up to the **primary** ratio whenever we play the **primary** ratios, which is not very convenient to always have to do to be in tune. Unlike the **secondary** ratios that are sharp and harsh, flatter more depressed intervals actually can be expressive if we can play them!

## Compendium Musica

The question is, whether singing, or playing on a **Sarod** without frets, can our ear even be accurate enough to distinguish notes that are a fifth of a semitone apart? I would say the answer is no, not at all. We need a measured instrument, that is, one with frets to be able make and recognize such fine microtonal variations.

So how else can we deal purposefully and musically, and make sense of the 10 **secondary** ratios? We will look at them from a few different angles.

Starting simply.

**Bb-16/9** tunes a perfect fourth ( $4/3$ ) above **F-4/3**. If we want instead to tune a pure minor third ( $6/5$ ) above **G-3/2** then we can use **Bb $\uparrow$ -9/5** instead. We are able to do this as we have **Pa (G)** to reference for tuning. Of course this begs the question, if the drone is **Sa Pa (C G)**, how can we tune **Bb-16/9** in the first place? **Bb-16/9** is however a much better sounding note against the drone than the sharp **Bb $\uparrow$ -9/5**.

If we can differentiate between these two **Bb**'s then it will be absolutely no problem to bend ever so slightly **Bb-16/9** up to the sharper **Bb $\uparrow$ -9/5**. We can most likely here say than that **Bb $\uparrow$ -9/5** is actually an expressive variation on **Bb-16/9**, primarily because it can be measured and tuned to the **Pa (G)** of the **Sa Pa (C G)** drone.

We can extend this concept, by tuning **primary** ratios from **Pa (G)** instead of **Sa (C)**.  $9/8$  above **G-3/2** gives us **A-27/16**, and  $45/32$  above **G-3/2** gives us **C#-135/128**. **C#-135/128** doesn't exist as a **shruti**, but has a very close **enharmonic** ratio of **Db-256/243**, which is only  $1/50^{\text{th}}$  of a semitone different. All the other **primary** ratios tuned from **G-3/2** give us the same ratios as **primary** ratios tuned from **C-1/1**.

Can we tune any of the remaining 7 **secondary** ratios to anything similar? Only if we change the drone.

In Indian music the main drone is **Sa Pa (C G)**. However, if the **raga** doesn't contain the **Pa (G)** **swara**, but does contain the **Ma (F)** **swara**, then the drone is usually changed to **Sa Ma (C F)**.

When we change the drone from **Sa Pa (C G)** to **Sa Ma (C F)** then we can theoretically open up a whole new can of worms. No matter how we want to look at it, by changing the drone from **Sa Pa (C G)** to **Sa Ma (C F)** we are effectively changing acoustically the tonic from **C** to **F**, using Western terminology.

Of course in the west we would just simply change the movable **Do** to **F**, or any other new key we wanted to be in, and be done with it. In Indian music **Sa** remains **Sa** regardless. It makes no sense in Indian music to rename all the note names just because we change the drone to **Sa Ma (C F)**, no matter if we want to believe we are in **F** tonic now or not.

## Compendium Musica

If **Pa (G)** is missing from the **raga**, then **Pa (G)** can't be immutable if it doesn't even appear! It isn't then too far a stretch to make **Sa Ma (C F)** immutable! And if we do so, then our new scale, assuming **F** to be the new tonic, would have the **swaras** or note names:

**F Gb G Ab A Bb B C Db D Eb E F**

Everything is the same, except we have the forbidden note **Gb**. **G** (like **C**) is to be immutable and is not to admit of any alteration by sharp or flat to its existence. We will however work around that in a very clever way!

When playing a **Sa Ma (C F)** drone and re-evaluating the tonic as **F** we have to change a few ratios to be in tune in the same way as we are when the notes were tuned to the **Sa Pa (C G)** drone.

**D-9/8** needs to be lowered to **D↓-10/9** to be a (5/3) ratio with **F-4/3**.

**Eb↑-6/5** needs to be lowered to **Eb-32/27** to be a (16/9) ratio with **F-4/3**.

And what about the **Gb**? We can again take a page out of the “**Enharmonic Tunings and Temperaments**” chapter of the **Compendium Music**. As **Db↑-16/15** is the interval (16/15) above **C-1/1** when the drone is **Sa Pa (C G)**, we need the **Gb↑** to be the interval (16/15) above **F-4/3** when the drone is **Sa Ma (C F)**.

This gives us **Gb↑-64/45**, but there is no (64/45) **shruti**! There is however the **enharmonic F#-729/512** which is only 1/50 of a semitone different, so for all extensive purposes almost identical to **Gb↑-64/45**! Of course **Gb↑-64/45** is not exactly **F#-729/512**, but they serve the same pitch function no matter how the pitch is written as a note name or **swara**.

No matter how we look at it we have to break one rule regardless. Either we allow there to be a **Gb** (almost identical in pitch, but with a slightly different ratio), or we allow a scale that has both **F** and **F#**.

The **swaras**, with the new adjusted ratios underlined, for the **Sa Ma (C F)** drone would now be:

**F-4/3** **Gb↑-64/45** **G-3/2** **Ab↑-8/5** **A↓-5/3** **Bb-16/9** **B↓-15/8** **C-1/1** **Db↑-16/15** **D↓-10/9** **Eb-32/27** **E↓-5/4** **F-4/3**  
(**F#-729/512**)

This takes care of three more **secondary** ratios. We still have 4 more to try and explain!

## Compendium Musica

The **Carnatic** music system has more notes than the **Hindustani** music system. The **Carnatic** music system also has the **swaras Ebb, D#, Bbb and A#**. This is of course why there are 72 **Carnatic Melakartas** (Parent scales) and only 32 **Hindustani Thaats** (Parent scales).

We can assign **enharmonic** equivalents from the **shrutis** for the four extra **Carnatic swaras**:

|   |  |
|---|--|
| <b>Ebb</b> → <b>D<sub>↓</sub>-10/9</b> or <b>D-9/8</b>  | <b>D#</b> → <b>Eb-32/27</b> or <b>Eb<sub>↑</sub>-6/5</b> |
| <b>Bbb</b> → <b>A<sub>↓</sub>-5/3</b> or <b>A-27/16</b> | <b>A#</b> → <b>Bb-16/9</b> or <b>Bb<sub>↑</sub>-9/5</b>  |

Even so, whether the **Carnatic swaras** are **enharmonic** or not, there is still no reason to pick any of the lesser in tune ratios. We are starting to run out of options and justifications!

But...if we look at a few fretted Indian instruments that have **Sa (C)** and **Pa (G)** strings and **Ma (F)** as the main playing string we can account for almost all of the 22 **shrutis**! We will though have to include the three extra optional ratios for the **Sa Ma (C F)** drone on the **Ma (F)** string.

### Ma (F) String

**F-4/3** **F#<sub>↓</sub>-45/32** **(Gb<sub>↑</sub>-64/45)** **G-3/2** **Ab<sub>↑</sub>-8/5** **A<sub>↓</sub>-5/3** **Bb-16/9** **B<sub>↓</sub>-15/8** **C-1/1** **Db<sub>↑</sub>-16/15** **D<sub>↓</sub>-10/9** **D-9/8** **Eb-32/27** **Eb<sub>↑</sub>-6/5** **E<sub>↓</sub>-5/4**  
F#-729/512

### Pa (G) Strings

**G-3/2** **Ab-128/81** **Ab<sub>↑</sub>-8/5** **A-27/16** **Bb<sub>↑</sub>-9/5** **B<sub>↓</sub>-15/8** **C-1/1** **Db-256/243** **D-9/8** **Eb<sub>↑</sub>-6/5** **E<sub>↓</sub>-5/4** **E-81/64** **F-4/3** **F<sub>↑</sub>-27/20** **F#<sub>↓</sub>-45/32**  
(G#<sub>↓</sub>-405/256) (C#<sub>↓</sub>-135/128)

### Sa (C) Strings

**C-1/1** **Db-256/243** **Db<sub>↑</sub>-16/15** **D-9/8** **Eb<sub>↑</sub>-6/5** **E<sub>↓</sub>-5/4** **F-4/3** **F#<sub>↓</sub>-45/32** **G-3/2** **Ab<sub>↑</sub>-8/5** **A<sub>↓</sub>-5/3** **A-27/16** **Bb-16/9** **Bb<sub>↑</sub>-9/5** **B<sub>↓</sub>-15/8**  
(C#<sub>↓</sub>-135/128)

The only **shruti** or ratio missing in the above string chart is **B-243/128**! There is really no other way to justify it so we might just as well include it on the **Ma (F)** string as an expressive sharpened variation of **B<sub>↓</sub>-15/8**.

When the strings of an Indian fretted instrument are all tuned to either **Sa Pa (C G)** or **Sa Ma (C F)** the total number of **shrutis** that occur between the frets and strings is only 19.

## Compendium Musica

The five tuning charts very clearly lay out how with only twelve frets there is no one possible perfect solution when adjusting the frets for tuning the pitches or **shrutis**. The tuning charts show both the position of the frets for the **primary** ratios for the **Sa Pa (C G)** drone, and the three adjusted pitches required to be in tune for the **Sa Ma (C F)** drone.

We will look at one more defining parameter as concerning **shrutis**. We have above stretched the rules a little bit theoretically and introduced three **enharmonic** notes and their ratios which are only  $1/50^{\text{th}}$  of a semitone different to their related **shrutis**.

Keeping with rule that **Sa (C)** and **Pa (G)** are immutable, we can find all 22 **shrutis** by unfolding three levels of perfect fifths. The first level contains **Sa (C)** and **Pa (G)**:

(no Gb) **Db-256/243** **Ab-128/81** **Eb-32/27** **Bb-16/9** **F-4/3** **C-1/1** **G-3/2** **D-9/8** **A-27/16** **E-81/64** **B-243/128** **F#-729/512** (no C#)

and stops when we hit the inadmissible notes Gb and C#.

The second level of perfect fifths is a **syntonic comma (81/80)** higher, which also stops when it hits the inadmissible notes of Gb↑ and C↑.

(no Gb↑) **Db↑-16/15** **Ab↑-8/5** **Eb↑-6/5** **Bb↑-9/5** **F↑-27/20** (no C↑)

The third level of perfect fifths is a **syntonic comma (81/80)** lower, which also stops when it hits the inadmissible notes of G↓ and C#↓.

(no G↓) **D↓-10/9** **A↓-5/3** **E↓-5/4** **B↓-15/8** **F#↓-45/32** (no C#↓)

No matter how we relate this last way of looking at the 22 **shrutis** to the real musical world, as we have tried to do, it does present the easiest, most satisfying and most comprehensive layout of the 22 **shrutis** possible.

As an aside, in the same way as the very comprehensive **Partch 43 note Just Intonation** scale has nothing to do with the awesome 43 note **equal temperament**, so neither does the beautiful Indian **Just Intonation** system of 22 **Shrutis** have anything whatsoever or even remotely, to do with the awful sounding 22 note **equal temperament**, though some people always try to make some sort of correlation.

This analysis of the 22 **Shrutis** is about as far as I can go trying to explain and uncover its idea and implementation.

♦ Fretted Indian Instruments ♦

It is a common misconception that singers, and instruments without frets like the Sarod and Violin, are capable of singing or playing any scale possible. In actuality, the only scale they can sing or play is an irregular one, with notes that the ear deems to be in tune, in the context of the moment. No one can in real time sound an equal tempered scale or realize accurately the pitch nuances of two **shrutis** a **syntonic comma** (81/80) apart.

The ear can accurately realize a pitch that is a fundamental ratio (1:1, 2:1, 3:2, 4:3, 5:3, 5:4 etc) by the phenomena of the way the pitches vibrate and combine together. To find more complicated ratios requires some sort of method or measuring tool. Above, we can see that frets can be considered a measuring tool, as they allow us to accurately find **shrutis** that we wouldn't be able to find just by ear. Frets are also a tool that allows a pitch to be repeated accurately in real time over and over again. It takes time and various methods to set the exact position of the fret for the desired pitch, but once that has been done, one can be confident that every time we play that fret, it will produce the pitch we desire.

The first tuning chart deals with instruments that have strings tuned as **Sa (C)**, **Pa (G)**, **Sa (C)** and **Ma (F)** as the main playing string.

The second tuning chart deals with instruments that have their strings tuned **Sa (C)**, **Ma (F)**, **Sa (C)**, **Ma (F)**.

The third tuning chart deals with instruments that have their strings tuned **Sa (C)**, **Pa (G)**, **Sa (C)**, **Pa (G)**.

The fourth tuning chart deals with instruments that have their strings tuned **Pa (G)**, **Sa (C)**, **Pa (G)**, **Sa (C)**. The intervals between the strings here is exactly the same as the intervals between the strings of the second tuning chart. Tuning chart 4 is then an **Inversion** of tuning chart 2, though the position of the frets is different, and its **Sa (C)** is effectively a perfect fourth higher than the **Sa (C)** of tuning chart 2. In all the literature I have read about Indian music, nowhere have I read about how **Sa Ma (C F)** can be **inverted** to become **Pa Sa (G C)**.

The fifth tuning chart deals with instruments that have their strings tuned **Ma (F)**, **Sa (C)**, **Ma (F)**, **Sa (C)**. The intervals between the strings here is exactly the same as the intervals between the strings of the third tuning chart. Tuning chart 5 is then an **Inversion** of tuning chart 3, though the position of the frets is different, and its **Sa (C)** is effectively a perfect fifth higher than the **Sa (C)** of tuning chart 3. In this case **Sa Pa (C G)** can be **inverted** to **Ma Sa (F C)**.

All the tunings charts show both the **primary** ratios for the **Sa Pa (C G)** drone and the three adjusted ratios for the **Sa Ma (C F)** drone.

If one can decipher what the five tuning charts are trying to lay out, then one can intelligently make choices on how one would like to position the frets as concerning the tuning of the **shrutis**, their possibilities and limitations.

In Indian music there is only one **Sa (C)** regardless of how high or low, for male voice or female voice, it is tuned. Pitch in Indian music is relative. In the Western world though, pitch is standardized, usually around **A-440**. So while an Indian musician will tune for example, a sitar relative to itself, a Western musician would say that the sitar is tuned around **concert C, C# or D**. Everyone still thinks of all the notes or **swaras** related to **Sa** or **C**, no matter how high or low it is tuned relatively or compared to Western pitch.

A number of charts show possible tuning ranges of a number of Indian instruments compared to Western pitches.

### ♦ Ragas, Ornamentation, Rhythm, Aesthetics ♦

From the “**Parent Scales**” the **Ragas** are derived. A **raga** is more than just a scale in Western terms. It has a mood, a time to be played, and different number of notes ascending and descending (and not always scale wise either). **Ragas** also have prominent notes that are focused on, and defining phrases and note combinations.

Many **ragas** may exactly the same notes as another **raga** of a different name, however their defining characteristics might be completely different. Not a single **raga** has been included in this treatise. There are hundreds and hundreds of **ragas**. One can easily nowadays look up any list of **Ragas**. It is not enough just to learn the note names of the **raga**. One has to learn what it is that defines a specific **raga**. This is only learned by osmosis and listening and understanding the personality of a **raga**, in the same way we slowly learn about a new friend. This is beyond the scope of any written treatise.

Once we have settled on a **raga**, its notes aren't just played plainly like they are for the most part in Western music. The notes are played with a complex of possible ornamentations, like graces and glides and oscillations and so on. Individual **ragas** also have rules for which ornamentations are acceptable for each **raga**. **Hindustani** and **Carnatic** traditions have different, though related **Alankara**, meaning “ornament” or “decoration”.

Again a written treatise cannot explain in words what is a lifelong study of a tradition that can only be learned by the ear and listening, studying and practicing. It is enough to explain that **Alankara** exist, that there are many, many possible kinds of ornaments, and that it is an integral, incredibly important facet of playing Indian music.

Improvisation is a huge, undeniable part of Indian music. Many improvisations start in a free rhythm which slowly solidifies its timing, until the percussionist(s) enter in a strict time. The rhythmic cycle established by the percussionist(s) is called a **Tala**, which can have any number of beats divided into any number of sub groups.

## ***Compendium Musica***

The complexity of Indian rhythms and the skill of the percussionists in playing the rhythms is incredible. Again this is a lifelong study, well beyond the scope of this **Introduction**.

And finally, the **aesthetics** of what the performer is trying to convey and what the listener is emotionally responding to. No matter the culture, this part of music is its philosophy, spirituality and metaphysical existence that relates it to all time and the universe. Almost not possible to put into words, but words are the only way we can try to explain these ideas. Music is one of the ways we try to realize these concepts!

### ♦ **Hindustani and Carnatic Music** ♦

Once we have looked at everything above, there are still the different types of musical forms that are played and improvised and composed in. Words can no more convey their forms, traditions and styles than the words sonata or fugue can in anyway explain what those forms actually entail in Western music, and the huge variety that is possible under the umbrella of those terms.

Every single culture has many types and styles of music to be played for different functions and rituals. Naming them however tells us nothing of how different kinds of pieces sound and are played, and the variety contained even within the name. Only by becoming part of the musical tradition can we learn about, play and enjoy all the different styles of Indian music.

This **Introduction** is but a road map, though **Shrutis** have been looked at with a huge amount of detail and depth. With a map to start with, one may journey forth on a real road, through a real field or forest, learning and experiencing and feeling for an entire lifetime!

.

## Note and Parent Scale Terms

**Swar, Swara, Swaras** = note and note names

-as with Western music there are seven note names

|                 |          |    |   |
|-----------------|----------|----|---|
| <b>Shadja</b>   | Sa       | Do | C |
| <b>Nishada</b>  | Ni       | Ti | B |
| <b>Dhaivata</b> | Dha      | La | A |
| <b>Panchama</b> | Pa       | So | G |
| <b>Madhyama</b> | Ma       | Fa | F |
| <b>Gandhara</b> | Ga       | Mi | E |
| <b>Rishabha</b> | Re or Ri | Re | D |
| <b>Shadja</b>   | Sa       | Do | C |

being exactly the same as Do Re Mi Fa So La Ti Do (Solfege)

**Sargam** = the short form of the note names

-the collection of these notes/syllables for singing

-the word is derived from the first four notes (Sa, Re/Ri, Ga, Ma)

**Saptak** = octave

-containing the gamut of "sapta" (seven) notes

**Taar Saptak** -upper octave (head) (dot over a note)

**Madhya Saptak** -middle octave (throat)

**Mandra Saptak** -lower octave (heart) (dot under a note)

**Achala or Prakruti Swara** = invariable notes

-the immutable fixed anchor notes Sa and Pa

**Chala or Vikruti Swara** = variable notes

-the remaining notes that are variable by accidentals

**Komal, Shuddha, Tivra** = flat, natural, sharp

-the Hindustani names for the accidentals

-Carnatic music uses different names for the accidentals

**Swara Prakara** = chromatic scale

-the twelve universal chromatic notes of the octave

**Shruti** = the pitch of a note

-there are 22 microtonal pitch variations for the 12 notes in the octave

**Thaat** = Hindustani parent scale

-there are 32 Hindustani "parent" scales from which ragas are constructed

**Melakarta** = Carnatic parent scale

-there are 72 Carnatic "parent" scales from which ragas are constructed

-**Melakarta** means "Lord of the Scale"

-also known as "**Janaka raga**" (meaning "father raga"),

from which "**Janya ragas**" (meaning "begotten ragas") are derived

-also known as "**Asraya raga**" (meaning "shelter-giving raga"),

from which "**Asrita ragas**" (meaning "sheltered ragas") are derived

-groups of derived ragas in Carnatic music are called **Thaata**

**Parameters for the parent scales**

-Both **Thaat** and **Melakarta** "parent" scales have:

-all seven notes of the scale (**Sa Re/Ri Ga Ma Pa Dha Ni**) and the upper octave **Śa**

-can't contain both natural and altered version of the same note

-are the same ascending and descending without any jumps or zig-zags

-are used to derive ragas

## Tetrachord Combinations

### Hindustani and Carnatic Music Tetrachords

| <u>Perfect Fourth Lower Tetrachord</u> |   |                |                |   |
|--|---|----------------|----------------|---|
| Major                                  | 2 | 2              | 1              |   |
|  | C | D              | E              | F |
| Minor                                  | 2 | 1              | 2              |   |
|  | C | D              | E <sup>b</sup> | F |
| Phrygian                               | 1 | 2              | 2              |   |
|  | C | D <sup>b</sup> | E <sup>b</sup> | F |

## 7 Swaras and 22 Shrutis

**Swar, Swara, Swaras** = note and note names  
**Sargam** = the short form of the note names  
**Saptak** = octave

**Achala or Prakruti Swara** = immutable fixed anchor notes Sa and Pa  
**Chala or Vikruti Swara** = notes variable by accidentals  
**Swara Prakara** = chromatic scale  
**Shruti** = the pitch of a note

# Compendium Musica

## Tuning and Frets 1

### Sa Pa Sa Ma Tuning

22 Shrutis used in total

(all 5 Limit ratios calculated by Perfect Fifths  
and Syntonic Commas)

Syntonic Comma =  $(81/80) = 21.51$  cents  
↑, ↓ = Syntonic Comma sharp, flat

Sitar, Sarod, Esraj, Dilruba  
- Sa Concert Pitch → C, Db, D

Rudra Veena, Surbahar  
- Sa Concert Pitch → F, F#, G, Ab, A

Sarangi (Pa Sa Ma) - Sa Concert Pitch → F to C  
Violin - Sa Concert Pitch → E to B

Saraswati Veena - Sa Concert Pitch → Bb, B, C  
( Tuning 2 Variation: Sa Ma Sa Ma → Sa Pa Sa Ma )

Frets for Sa Pa ( C G ) Drone and  
Sa Ma ( C F ) Drone with primary ratios (pr)

Frets for Sa Ma ( C F ) Drone  
with three adjusted ratios (ar)

( The Rudra and Saraswati Veena strings strung in the opposite direction to  
the Sitar and the Surbahar. The 4th playing string is closest to the ground )

| 4th String                        |    |       |         |               | ← 3/2 →   |       |       |               |         | 3rd String  |       |       |               |        | ← 4/3 →   |       |            |               |         | 2nd String                       |         |       |               |  | ← 4/3 → |       |       |               |  | 1st String |  |  |  |  |

**Notes:** -Sitar and Surbahar frets can be angled for tuning on the first and second strings.  
-The intonation of the third and fourth string is usually so bad in the higher positions that exact fret placement on these strings, (caused by angling the frets for the first and second strings) is of no importance.  
-Rudra Veena frets cannot be angled.  
  
-Fret placement is dependent on whether the drone is Sa-Pa or Sa-Ma, which depends on the raga. There is no one perfect solution for all possibilities.

# Compendium Musica

## Tuning and Frets 2

### Sa Ma Sa Ma Tuning

19 Shrutis used in total

(all 5 Limit ratios calculated by Perfect Fifths  
and Syntonic Commas)

Syntonic Comma = (81/80) = 21.51 cents

↑, ↓ = Syntonic Comma sharp, flat

Sitar, Sarod, Esraj, Dilruba  
- Sa Concert Pitch → C, Db, D

Rudra Veena, Surbahar  
- Sa Concert Pitch → F, F#, G, Ab, A

Sarangī (Ma Sa Ma) - Sa Concert Pitch → F to C  
Violin - Sa Concert Pitch → E to B

Saraswati Veena - Sa Concert Pitch → Bb, B, C  
(Sa Ma Sa Ma = Tuning 4 Pa Sa Pa Sa "inverted")

Frets for Sa Ma (C F) Drone  
with primary ratios (pr)

Frets for Sa Ma (C F) Drone  
with three adjusted ratios (ar)

(The Rudra and Saraswati Veena strings strung in the opposite direction to  
the Sitar and the Surbahar. The 4th playing string is closest to the ground)

| 4th String                       |    |         |         |         | ← 4/3 →                          |        |            |         |         | 3rd String                        |  |         |         |         | ← 3/2 →                          |       |            |         |         | 2nd String                       |  |  |       |       | ← 4/3 →       |  |  |  |  | 1st String |  |  |  |  |

## Tuning and Frets 3

### Sa Pa Sa Pa Tuning

19 Shrutis used in total

(all 5 Limit ratios calculated by Perfect Fifths  
and Syntonic Commas)

Syntonic Comma =  $(81/80) = 21.51$  cents  
↑, ↓ = Syntonic Comma sharp, flat

Sitar, Sarod, Esraj, Dilruba  
- Sa Concert Pitch → C, Db, D

Rudra Veena, Surbahar  
- Sa Concert Pitch → F, Gb, G, Ab, A

Sarangi (Pa Sa Pa) - Sa Concert Pitch → Eb to Bb  
Violin - Sa Concert Pitch → D to A

Saraswati Veena - Sa Concert Pitch → Ab, A, Bb  
(Sa Pa Sa Pa = Tuning 5 Ma Sa Ma Sa "inverted")

Frets for Sa Pa (C G) Drone and  
Sa Ma (C F) Drone with primary ratios (pr)

Frets for Sa Ma (C F) Drone  
with three adjusted ratios (ar)

(The Rudra and Saraswati Veena strings strung in the opposite direction to  
the Sitar and the Surbahar. The 4th playing string is closest to the ground)

| 4th String  |          |            |         |               | 3rd String  |       |         |               |            | 2nd String  |         |               |       |       | 1st String  |               |       |  |  |

## Tuning and Frets 4

### Pa Sa Pa Sa Tuning

19 Shrutis used in total

( Tuning 2 Sa Ma Sa Ma "Inverted" = Pa Sa Pa Sa perfect 4th higher )

(all 5 Limit ratios calculated by Perfect Fifths  
and Syntonic Commas)

Syntonic Comma =  $(81/80) = 21.51$  cents  
↑, ↓ = Syntonic Comma sharp, flat

Sitar, Sarod, Esraj, Dillruba  
- Sa Concert Pitch → F, Gb, G

Rudra Veena, Surbahar  
- Sa Concert Pitch → Bb, B, C, Db, D

Sarangi (Sa Pa Sa) - Sa Concert Pitch → Bb to F  
Violin - Sa Concert Pitch → A to E

Saraswati Veena - Sa Concert Pitch → Eb, E, F  
( Pa Sa Pa Sa = Tuning 2 Sa Ma Sa Ma "inverted" )

Frets for Sa Pa ( C G ) Drone and  
Sa Ma ( C F ) Drone with primary ratios (pr)

Frets for Sa Ma ( C F ) Drone  
with three adjusted ratios (ar)

( The Rudra and Saraswati Veena strings strung in the opposite direction to  
the Sitar and the Surbahar. The 4th playing string is closest to the ground )

**Notes:** -Not only can the Saraswati Veena frets not be angled like the Sitar frets can, they can't even be moved. The tuning and frets to the left present an unobtainable ideal that the Saraswati Veena is not possible to even remotely reach.

-The tuning of the Saraswati Veena is dependent entirely on the position of the fixed frets and the bridge placement for intonation, and will never be able to be play exactly in tune in Just Intonation.

## Tuning and Frets 5

### Ma Sa Ma Sa Tuning

19 Shrutis used in total

( Tuning 3 Sa Pa Sa Pa "Inverted" = Ma Sa Ma Sa perfect 5th higher )

(all 5 Limit ratios calculated by Perfect Fifths  
and Syntonic Commas)

Syntonic Comma = (81/80) = 21.51 cents

↑,↓ = Syntonic Comma sharp, flat

Sitar, Sarod, Esraj, Dilruba  
- Sa Concert Pitch → G, Ab, A

Rudra Veena, Surbahar  
- Sa Concert Pitch → C, Db, D, Eb, E

Sarangī (Sa Ma Sa) - Sa Concert Pitch → Bb to F  
Violin - Sa Concert Pitch → A to E

Saraswati Veena - Sa Concert Pitch → Eb, E, F  
( Ma Sa Ma Sa = Tuning 3 Sa Pa Sa Pa "inverted" )

Frets for Sa Ma ( C F ) Drone  
with primary ratios (pr)

Frets for Sa Ma ( C F ) Drone  
with three adjusted ratios (ar)

( The Rudra and Saraswati Veena strings strung in the opposite direction to  
the Sitar and the Surbahar. The 4th playing string is closest to the ground )

|  |    |            |         |                  |            |       |          |                  |         |            |       |                  |         |         |            |                  |          |         |         |        |

## Instruments at Concert Pitch

### Sitar, Sarod, Esraj, Dilruba

| Tuning 1 |     |    |    |
|----------|-----|----|----|
| Sa       | Pa  | Sa | Ma |
| D        | A   | D  | G  |
| Db       | Ab  | Db | Gb |
| C        | G   | C  | F  |
| (IV      | III | II | I) |

| Tuning 2                 |    |    |    |
|--------------------------|----|----|----|
| Sa                       | Ma | Sa | Ma |
| D                        | G  | D  | G  |
| Db                       | Gb | Db | Gb |
| C                        | F  | C  | F  |
| Pa                       | Sa | Pa | Sa |
| Tuning 4 = T2 "Inverted" |    |    |    |

| Tuning 3                 |    |    |    |
|--------------------------|----|----|----|
| Sa                       | Pa | Sa | Pa |
| D                        | A  | D  | A  |
| Db                       | Ab | Db | Ab |
| C                        | G  | C  | G  |
| Ma                       | Sa | Ma | Sa |
| Tuning 5 = T3 "Inverted" |    |    |    |

### Rudra Veena, Surbahar

| Tuning 1   |     |    |    |
|--|-----|----|----|
| Sa   | Pa  | Sa | Ma |
| A  | E   | A  | D  |
| Ab   | Eb  | Ab | Db |
| G  | D   | G  | C  |
| F#   | C#  | F# | B  |
| F  | C   | F  | Bb |
| (IV  | III | II | I) |
| (Rudra Veena fourth string lowest to the ground) |     |    |    |

| Tuning 2                 |    |    |    |
|--------------------------|----|----|----|
| Sa                       | Ma | Sa | Ma |
| A                        | D  | A  | D  |
| Ab                       | Db | Ab | Db |
| G                        | C  | G  | C  |
| F#                       | B  | F# | B  |
| F                        | Bb | F  | Bb |
| Pa                       | Sa | Pa | Sa |
| Tuning 4 = T2 "Inverted" |    |    |    |

| Tuning 3                 |    |    |    |
|--------------------------|----|----|----|
| Sa                       | Pa | Sa | Pa |
| A                        | E  | A  | E  |
| Ab                       | Eb | Ab | Eb |
| G                        | D  | G  | D  |
| Gb                       | Db | Gb | Db |
| F                        | C  | F  | C  |
| Ma                       | Sa | Ma | Sa |
| Tuning 5 = T3 "Inverted" |    |    |    |

### Saraswati Veena

| Tuning 1 "Variation"                 |     |    |    |
|--------------------------------------|-----|----|----|
| Sa                                   | Pa  | Sa | Ma |
| C                                    | G   | C  | F  |
| B                                    | F#  | B  | E  |
| Bb                                   | F   | Bb | Eb |
| (IV                                  | III | II | I) |
| (fourth string lowest to the ground) |     |    |    |

| Tuning 2 = T4 "Inverted" |    |    |    |
|--------------------------|----|----|----|
| Sa                       | Ma | Sa | Ma |
| C                        | F  | C  | F  |
| B                        | E  | B  | E  |
| Bb                       | Eb | Bb | Eb |
| Pa                       | Sa | Pa | Sa |
| Tuning 4                 |    |    |    |

| Tuning 3 = T5 "Inverted" |    |    |    |
|--------------------------|----|----|----|
| Sa                       | Pa | Sa | Pa |
| Bb                       | F  | Bb | F  |
| A                        | E  | A  | E  |
| Ab                       | Eb | Ab | Eb |
| Ma                       | Sa | Ma | Sa |
| Tuning 5                 |    |    |    |

### Sarangi (approximate range dependent upon string guages)

| Tuning 1 |    |    |
|----------|----|----|
| Pa       | Sa | Ma |
| G        | C  | F  |
| F#       | B  | E  |
| F        | Bb | Eb |
| E        | A  | D  |
| Eb       | Ab | Db |
| D        | G  | C  |
| C#       | F# | B  |
| C        | F  | Bb |
| (III     | II | I) |

| Tuning 2 = T4 "Inverted" |    |    |
|--------------------------|----|----|
| Ma                       | Sa | Ma |
| F                        | C  | F  |
| E                        | B  | E  |
| Eb                       | Bb | Eb |
| D                        | A  | D  |
| Db                       | Ab | Db |
| C                        | G  | C  |
| B                        | F# | B  |
| Bb                       | F  | Bb |
| Sa                       | Pa | Sa |
| Tuning 4                 |    |    |

| Tuning 2 = T5 "Inverted" |    |    |
|--------------------------|----|----|
| Pa                       | Sa | Pa |
| F                        | Bb | F  |
| E                        | A  | E  |
| Eb                       | Ab | Eb |
| D                        | G  | D  |
| Db                       | Gb | Db |
| C                        | F  | C  |
| B                        | E  | B  |
| Bb                       | Eb | Bb |
| Sa                       | Ma | Sa |
| Tuning 5                 |    |    |

### Violin (approximate range dependent upon string guages)

| Tuning 1 |     |    |    |
|----------|-----|----|----|
| Sa       | Pa  | Sa | Ma |
| B        | F#  | B  | E  |
| Bb       | F   | Bb | Eb |
| A        | E   | A  | D  |
| Ab       | Eb  | Ab | Db |
| G        | D   | G  | C  |
| F#       | C#  | F# | B  |
| F        | C   | F  | Bb |
| E        | B   | E  | A  |
| (IV      | III | II | I) |

| Tuning 2 = T4 "Inverted" |    |    |    |
|--------------------------|----|----|----|
| Sa                       | Ma | Sa | Ma |
| B                        | E  | B  | E  |
| Bb                       | Eb | Bb | Eb |
| A                        | D  | A  | D  |
| Ab                       | Db | Ab | Db |
| G                        | C  | G  | C  |
| F#                       | B  | F# | B  |
| F                        | Bb | F  | Bb |
| E                        | A  | E  | A  |
| Pa                       | Sa | Pa | Sa |
| Tuning 4                 |    |    |    |

| Tuning 3                 |    |    |    |
|--------------------------|----|----|----|
| Sa                       | Pa | Sa | Pa |
| A                        | E  | A  | E  |
| Ab                       | Eb | Ab | Eb |
| G                        | D  | G  | D  |
| Gb                       | Db | Gb | Db |
| F                        | C  | F  | C  |
| E                        | B  | E  | B  |
| Eb                       | Bb | Eb | Bb |
| D                        | A  | D  | A  |
| Ma                       | Sa | Ma | Sa |
| Tuning 5 = T3 "Inverted" |    |    |    |

## Raga Terms

**Raga** = melodic framework for improvisation

- the literal meaning of Raga is to "colour, tinge, dye", so to "colour the mind" of the listener with emotion and feeling
- each Raga has an emotional significance or mood (**Rasa**), and an association with a time (**Samay**), and season (**Ritu**)
- there are four three hour **Prahars** for the daytime cycle of Ragas (**Purva Bhaag**), and four for the evening cycle of Ragas (**Uttar Bhaag**).
- there are also Ragas for dawn **Praatahkaalin**, (where Shuddha Madhyama is important), and Ragas for dusk **Saayamkaalin**, (where Tivra Madhyama is important), which are known as **Sandhi Prakash** (Joining Light) Ragas.
- the six seasons are **Vasant = Spring**, **Grishma = Summer**, **Varsha = Monsoon**, **Sharad = Autumn**, **Hemant = Late Fall**, **Shishir = Winter**
- Sarv-Kalik** ragas can be played at any time
- a Raga is an array of melodic structures and motifs, each with their own melodic personality
- each **Thaat** or **Melakarta** "parent" scale can contain several Ragas

**Arohana** = ascending scale notes of the raga  
**Avarohana** = descending scale notes of the raga

- ascending and descending scale forms can omit different notes

**Vakra Swaras** = crooked, twisted or zig-zag notes

- the ascending and descending scales are not always strictly so

**Varjya Swaras** = forbidden notes

- notes excluded from a Raga, also known as **Vivadi swaras**

**Jati** = system of classifying ragas

- Jati means "collection" or "caste"
- based on the number of notes in each of the Arohana and Avarohana scales

(???) = scale with 3 notes to the octave  
**Surtara** = scale with 4 notes to the octave  
**Audava** = scale with 5 notes to the octave  
**Shaadava** = scale with 6 notes to the octave  
**Sampurna** = scale with 7 notes to the octave

- 16 possible Jati raga classifications with 4,5,6 or 7 scale notes, for example:  
**Audava - Surtara** (5 note ascending - 4 note descending scales)  
**Sampurna - Sampurna** (7 note ascending - 7 note descending scales)  
 etc.

- Sampurna means "complete"

|                            |   |  |
|----------------------------|---|--|
| <b>Adhara Shadja</b>       | = beginning and end of the octave                   | -pitch level chosen by the performer   |
| <b>Adhista</b>             | = dividing note of the octave                       | -either Ma or Pa dividing the octave into two parts (anga)   |
| <b>Uttaranga</b>           | = upper part of the octave                          |  |
| <b>Purvanga</b>            | = lower part of the octave                          |  |
| <b>Vadi</b>                | = most prominent note of the raga                   | -in either upper or lower anga (part)  |
| <b>Samvadi</b>             | = second most prominent note                        | -consonant with the Vadi and in the opposite anga  |
| <b>Anuvadi</b>             | = neither emphasized or de-emphasized note          |  |
| <b>Durbal</b>              | = de-emphasized note                                |  |
| ♦♦♦                        |   |  |
| <b>Upanga Ragas</b>        | = ragas strictly derived from the parent scale      | -Carnatic music terms  |
| <b>Bhashanga Ragas</b>     | = ragas with notes external to the parent scale     | -these foreign notes are called " <b>Any</b> a" swara  |
| <b>Vivadi</b>              | = dissonant note                                    | -in Hindustani music all the notes that do not belong to the Arohana and Avarohana of the raga. These though sometimes can be skillfully introduced to add colour to the interpretation. |
| <b>Pakad</b>               | = defining phrase or characteristic of a raga       | -also called <b>Swarup</b> or <b>Mukhya-Ang</b>  |
| <b>Alankar</b>             | = note combinations of a raga                       | -literally meaning "jewels", notes following a particular pattern like an ornament   |
| <b>Vishranti Sthan</b>     | = resting notes of a raga                           | -good consonant resolving notes to end a phrase or improvisation on  |
| ♦♦♦                        |   |  |
| <b>Avirbhav</b>            | = the original form of the Raga                     | -making the raga and its distinguishing features visible   |
| <b>Tirobhav</b>            | = deviating from the original form of the Raga      | -showing glimpses of a nearby Raga   |
| ♦♦♦                        |   |  |
| <b>3 Raga Bhed (Types)</b> | -Shuddha Raga<br>-Chayalaga Raga<br>-Sankeerna Raga | -a single Raga unique to itself<br>-a Raga that is similar and closely related to other Ragas<br>-a Raga that is a combination of two or more Ragas                                      |

## Ornamentation Terms

|                 |                         |  |
|-----------------|-------------------------|--|
| <b>Alankara</b> | = musical ornamentation | <ul style="list-style-type: none"> <li>-literally means "ornament" or "decoration"</li> <li>-also called <b>Palta</b> in Hindustani music</li> <li>-general term for any type of musical ornamentation or adornment</li> <li>-<b>Alankara</b> can be either irrational, which belong between the notes of a scale, or rational belonging only to scale notes</li> <li>-irrational <b>Alankara</b> are covered in the theory of <b>Gamakas</b></li> </ul> |
|-----------------|-------------------------|--|

|               |                               |  |
|---------------|-------------------------------|--|
| <b>Gamaka</b> | = a pitch variation of a note | <ul style="list-style-type: none"> <li>-means "ornamented note"</li> <li>-pitch variation includes oscillations and glides between notes</li> <li>-each raga has specific rules for the types of "gamakas" used</li> <li>-there are 15 or more types of "gamakas" in Carnatic music</li> <li>-Carnatic and Hindustani music have different kinds of "gamakas"</li> </ul> |
|---------------|-------------------------------|--|

### Terms for Hindustani vocal and instrumental music

|                 |                                       |   |
|-----------------|---------------------------------------|---|
| <b>Kan-swar</b> | = a short grace note                  | <ul style="list-style-type: none"> <li>-can be sung or played before or after a note</li> <li>-extended Kan-swar become <b>Meends</b></li> </ul>                |
| <b>Meend</b>    | = a glide from one note to another    | <ul style="list-style-type: none"> <li>-on fretted instruments the string is bent or pulled across the fret</li> </ul>  |
| <b>Andolan</b>  | = a very slow pitch oscillation       | <ul style="list-style-type: none"> <li>-around a specific note depending on the raga</li> </ul>   |
| <b>Gamak</b>    | = an emphasised note with oscillation | <ul style="list-style-type: none"> <li>-singing the note with force produces the rapid oscillation</li> </ul>   |
| <b>Khatka</b>   | = an ornamental cluster of notes      | <ul style="list-style-type: none"> <li>-ornamenting a single main note</li> </ul>   |
| <b>Murki</b>    | = swift light cluster of notes        | <ul style="list-style-type: none"> <li>-like a trill, mordent or turn</li> </ul>  |
| <b>Taan</b>     | = a rapid melodic improvised passage  | <ul style="list-style-type: none"> <li>-used in vocal music and sung to a single vowel</li> </ul>   |
| <b>Zamzama</b>  | = a long complex cluster of notes     | <ul style="list-style-type: none"> <li>-rendered in progressive combinations and permutations</li> <li>-like a complex <b>Taan</b> with sharp Gamaks</li> </ul> |
| etc!            |                                       |   |

### Terms for Carnatic vocal and instrumental music

|                     |                                     |  |
|---------------------|-------------------------------------|--|
| <b>Jaaru</b>        | = a glide from one note to another  | <ul style="list-style-type: none"> <li>-on fretted instruments the string is bent or pulled across the fret</li> </ul> |
| <b>Kampitam</b>     | = a pitch oscillation between notes | <ul style="list-style-type: none"> <li>-moving between notes with a wavy pitch</li> </ul>                              |
| <b>Janta Swaras</b> | = double or repeated notes          | <ul style="list-style-type: none"> <li>-the second note is slightly forced and glides up from a lower pitch</li> </ul> |
| <b>Spuritam</b>     | = a very quick vibration            | <ul style="list-style-type: none"> <li>-exactly like the Janta Swaras but very fast</li> </ul>                         |
| etc!                |                                     |  |

## Rhythmic Terms

**Matra** = beat

**Vibhag (Ang)** = a group of beats

-like the Western bar, but each bar or **Vibhag** can have a different number of beats  
-each **Vibhag** is specially designated by a clap or a wave of the hand

**Avartan** = a rhythmic cycle

-each repeated cycle of a **Tala**

**Sam or Samam** = the first beat of a cycle

-means to "conjoin" or "come together"  
-point of resolution or beginning, a pivotal point  
-the transition point between soloists

◆◆◆

**Tala or Taal** = rhythmical grouping of **Matras** (beats) and **Vibhags** (bars)

-means literally "clapping of the hands"  
-there are **Talas** with rhythmic cycles between 3 and 108 beats  
-there are over 100 **Talas**, 30 known and 10-12 commonly used

**Tali** = Clap of the hand (c)

-Applies to the first beat of strongly stressed **Vibhags**

**Khali** = Wave of the hand (w)

-Applies to the first beat of moderately stressed **Vibhags**

| <u>Talas</u>          | <u>Beats</u> | <u>Vibhags and Matras</u>          |
|-----------------------|--------------|------------------------------------|
| Ardh Jhaptal          | =5           | = 2c + 3c                          |

|                              | <b>Suladi Sapta Talas</b>      | 35 Talas  |  |

### Aesthetic Terms

|                     |  |   |
|---------------------|--|---|
| <b>Nada</b>         | = musical or cosmic sound                  | -the manifestation of reality and the entire cosmos through the energy of vibrations<br>-the metaphysical aim of the composer/performer   |
| <b>Ahata Nada</b>   | = struck and audible sound                 | -The two types of sound, physical and metaphysical  |
| <b>Anahata Nada</b> | = unstruck and inaudible sound             | - <b>Anahata</b> is the basis of all existence and the principle of all manifestation   |
| <b>Bhava</b>        | = an emotional state that precedes Rasa    | -a state of mind and being<br>-the process of becoming<br>- <b>Bhava</b> is the flower, <b>Rasa</b> is the fruit<br>- <b>Bhava</b> is what is embodied, <b>Rasa</b> is what emerges |
| <b>Rasa</b>         | = emotional flavour or aesthetic of a work | -literally means "essence, nectar, taste"<br>- <b>Rasas</b> are created by <b>Bhavas</b><br>-an emotional feeling that can't be described connecting performer and listener         |

|            |                      |                      |                     |                       |                      |   |
|------------|----------------------|----------------------|---------------------|-----------------------|----------------------|---|
| Nine Moods | <u><b>Bhavas</b></u> | <u><b>Affect</b></u> | <u><b>Rasas</b></u> | <u><b>Emotion</b></u> | <u><b>Colour</b></u> | -example: the <b>Affect</b> of <b>Humour</b> is the <b>Emotion</b> of <b>Laughter</b> |
|            | Rati                 | Pleasure             | Shringara           | Love                  | Light Green          |   |
|            | Hasa                 | Humour               | Hasya               | Laughter              | White                |   |
|            | Krodha               | Anger                | Raudra              | Rage                  | Red                  |   |
|            | Shoka                | Sorrow               | Karuna              | Compassion            | Grey                 |   |
|            | Jugupsa              | Disgust              | Beebhatshya         | Loathing              | Blue                 |   |
|            | Bhaya                | Fear                 | Bhayanaka           | Terror                | Black                |   |
|            | Utsaha               | Perseverence         | Veera               | Valour                | Saffron              |   |
|            | Vismaya              | Amazement            | Adbhuta             | Wonder                | Yellow               |   |
|            | Shanta               | Peace                | Shanta              | Tranquility           | White                |   |

## Hindustani Music

|                         |  |   |
|-------------------------|--|---|
| <b>Hindustani Music</b> | <b>= Music from the north of India</b>                     | -more improvisation than composition              |
| <b>Gharana</b>          | <b>= Hindustani lineage and tradition of musical style</b> | -typically of a single musical family or court    |
| <b>Brij Bhasa</b>       | <b>= a dialect of Hindi</b>                                | -most common language for Hindustani compositions |

## Hindustani Music Forms or Styles of Singing and Compositions

-Dhrupad, Khayal, Chaturang (Tarana, Sargam), Dhamar, Hori, Thumri, Tappa, Ragasagar, Ghazal

### Dhrupad

- The oldest (12th century) and grandest form of Hindustani vocal music.
- A poetic form presented in an extended style, with precise and orderly elaboration of a **Raga**.
- Long composition of four parts: **Alap**, **Jod**, **Jhala** and **Bandish** (or **Cheez** or **Gat**)

#### First Unmeasured and Unpatterned Movement

- Alap** = Introduction or Invocation
- Jod** = Formal section
- Jhala** = Conclusion

- Means "dialogue" or "talk", and is a free melodic improvisation introducing and developing the Raga
- Means "pair", where a simple and steady unpatterned pulse is added to the music
- Means "web", where the unpatterned pulse or tempo greatly increases, and the rhythmic element overtakes the melodic element.

#### Second Measured Movement

- Bandish** = Fixed Composition
  - Sthayi** = first part
  - Antara** = second part
  - Sanchari** = third part
  - Aabhog** = fourth part
  - (**Bhoga** = possible fifth part)

- Means "binding together", and is a fixed composition with a specific raga, tala and words.
- Emphasising the lower octave and first tetrachord of the middle octave. "Sthayi means an "octave".
- Emphasising the second tetrachord of the middle octave and the higher octave.
- Development section typical in Dhrupad Bandishes
- Concluding section typical in Dhrupad Bandishes

### Khayal

- Literally means "imagination, thought, reflection" and is the most prominent romantic style of singing
- 18th century popular form combining Hindu and Persian traditions
- Based on a brief text elaborated with **Bol-Taans** and **Taans** (rapid vocal passages with or without words of the text)
- Bada Khayal** = First part, usually in a slow tempo (**Vilambit Laya**)
- Chota Khayal** = Second part, usually in a medium to fast tempo (**Madhya** or **Drut Laya**)
- When two soloists in co-operation divide the improvisation between them it is called **Jugalbandi**

**Chaturang**

- Song composition in four parts: fast **Khayal**, **Tarana**, **Sargam** and a **Paran** with Pakhawaj or Tabla
- Khayal** = singing the words or **bols** of the composition
- Tarana** = rapid improvised singing to nonsense syllables
- Sargam** = singing passages using note names or **swaras**
- Paran** = singing the sound syllables or **bols** used for the Pakhawaj or Tabla
- A **Chaturang** without the **Khayal** is called a **Trivat** (meaning three parts or colours)

**Dhamar**

- A song in **Dhrupad** style, utilizing the **Dhamar Tala** of 14 beats played on the Pakhawaj or Tabla.
- Light, gentle, romantic music concerning the antics of **Krishna** teasing the milkmaids during **Holi**.

**Hori**

- Semi-classical song popular in Uttar Pradesh and Bihar.
- Also called **Dhamar** and **Hori/Dhamar**, sung during the **Holi** Spring Festival of Colours.

**Thrumi**

- Romantic and erotic form of singing dealing with the subjects of Love, Separation and Devotion.
- Sung in slower tempos, lighter ragas and simpler talas.
- Closely related is **Dadra** which has more verses and is in **Dadra Tala** (six beat rhythm cycle in 3+3 beats).

**Tappa**

- Short folklore compositions written in Punjabi based on the **Shringara Rasa** (Love and Passion).
- However not sung in the Punjab! Sung in Varansi, Gwalior and the Bengal region.
- Developed in the late 18th century from the folk songs of camel riders.

**Ragasagar**

- Vocal composition with lyrics set to 8 to 12 different ragas.

**Ghazal**

- Poetic form originating in 10th century Iran.
- Never exceeds 12 couplets with 7 couplets on average.
- Began developing in India in the 12th century under Mughal influence.

## Carnatic Music

**Carnatic Music** = Music from the south of India

- main emphasis on vocal music
- equal importance to both composition and improvisation, complementing each other and taking turns, as a prelude to a song or extending it
- most compositions are sung in Telugu or Sanskrit

## Varnam

- Performed at the beginning of a recital revealing the features of a **Raga**.
- A very complex form which is usually quite lively.
- Different types include **Taana**, **Pada**, **Daru** and **Ragamalika** Varnam

### Sub-sections

- Pallavi** -the first section of a **Varnam** sung with lyrics
- Anupallavi** -a recapitulation sung with lyrics
- Muktaayi or Ettugade** -sung completely with syllables or swaras (except **Pada Varnam** can have lyrics)
- Sometimes the first three sections are repeated at a faster tempo*
- Charanam** -sung with lyrics
- Chitta Swara or Ettugadda Swaram** -sung completely with syllables (except **Pada Varnam** can have lyrics)
- Anubandham** -the epilogue of a **Varnam**
- some **Varnams** have extra parts that lead back to earlier sections

## Kriti

- A longer song format that is the backbone of any **Carnatic** concert
- A highly evolved song set to a particular **Raga** and **Tala**, usually in a three part form.

### Sub-sections

- Pallavi** -the refrain of a **Kriti**
- Anupallavi** -the second verse (sometimes optional)
- (**Chittaswara**) -(optional section sung completely with syllables or swaras)
- Charanam** -the final and longest verse that concludes the song
- the last line usually includes the composer's **mudra**, which is a specific group of words

### Ragam Tanam Pallavi

- A very complex form of singing that allows the performer to improvise to the greatest extent.
- The most complete form of Indian music, demonstrating the skill and depth of knowledge of the performer.
- Includes **Ragam**, **Tanam**, **Pallavi** and can include **Niraval**, **Kalpanaswaram** and **Tani Avartanam**.

### Alapana or Ragam

- Means to "speak, address, discourse, communicate".
- A pure form of melodic improvisation, creating the mood of the **Raga**, and laying down the foundation of the composition.
- A journey of exploration of the **Raga**, unfolding slowly without rhythm, and can last up to 45 minutes.
- Three parts include: **Akshipthika** - Introductory section giving the performer free reign to creatively express themselves  
**Ragavardhini** - Step by step elaboration on each **swara** of the **Raga**  
**Magarini** - Concluding section with rapid passages across the range of the **Raga**

### Tanam

- An improvisation expanding the Raga with the syllables "a-nam-tam".
- Performed as a rhythmic variation of Alapana but without a specific **Tala**, and usually not elaborately.

### Pallavi

- Made up of three syllables: **Pa** for Pada (words), **La** for Laya (rhythm) and **Vi** for Vinyasam (variations).
- A one line composition, equivalent to a refrain, set to one or more cycles of a **Tala**, played on the Mridangam and Ghatam.
- The **Pallavi** line has two halves, **Purvangam** and **Uttarangam**, and is expanded into the **Niraval** and **Kalpanaswaram** sections.

### Niraval

- An advanced improvisation, repeating the text of the **Pallavi** repeatedly, with melodic elaborations at various multiple tempos, maintaining the original patterns of duration and relation to the **Tala**.
- Performing the **Pallavi** in three different tempos with the same **Tala** is called **Trikalam**.

### Kalpanaswaram

- Like **Niraval**, except the performer improvises using **swara** names.
- The **Kalpana swaras** improvisations should always end in the same place of the rhythmic cycle of the **Tala**.
- The **swaras** can be sung at different multiple speeds.

### Tani Avartanam

- Pure rhythmic improvisation for the percussionists, exploring intricate aspects of a **Tala**.

### Ragamalika

- Means a "Garland" of Ragas, being a composition where different sections are set to different Ragas.

### Talamalika

- Means a "Garland" of Talas, being a composition where different sections are set to different Talas.

### Ragatalamalika

- A special kind of **Ragamalika** composition that incorporates a range of **Talas**.
